

Swing Arms

Rigid Lifelines™ Swing Arm fall protection systems provide unique and versatile fall protection solutions for work areas requiring limited work station coverage. Providing a circular or semi-circular fall protection coverage area, swing arms work where you do. They can be mounted to existing wall columns or to the floor in a freestanding configuration. Their versatility makes swing arms fully adaptable to facilities where overhead cranes are in use. The arm can be extended as needed and retracted to avoid impact with an overhead crane. All systems are engineered to meet and/or exceed ANSI and OSHA compliance and most are available as standard assemblies.

[NOTE: Our systems are designed with a maximum worker load of 400lbs (on one person systems) when used with 900lb Maximum Arresting Force self-retracting lanyards and properly rated full body harnesses and connecting hardware. Custom systems are available for multiple workers; please inquire with our sales department for more information.]

Swing into action with fall protection on demand!

- Overhead positioning eliminates swing fall hazards.
- Wide flange steel reinforced mast and cantilevered arm with enclosed rigid track provide stable, reliable fall protection.
- Circular fall protection coverage is ideal for small to medium-sized work areas (spans from 2'-0" to 30'-0"; 200° or 360° of rotation).
- Enclosed track design prevents dirt or dust build-up from interfering with trolley movement

Choose the options that work best for you!

- Wall mounted, mast mounted and column mounted styles available
- Custom spans available upon request
- Drop cantilever available for overhead obstructions
- Portable bases
- Boom locks
- Powered booms for longer custom spans
- Stainless steel for corrosive environments
- Single track, dual track, or multiple tracks
- Layered primer with single and double enamel coatings, epoxy coatings, and galvanized finish
